QUICKSCAN - CANVAS

Data Science

NAME: Data Science DATE: September 6, 2024 12:24 AM DESCRIPTION OF TECHNOLOGY Research on Open Source tooling for Data Annotation	HUMAN VALUES It could affect the user's decision making if they depend too much on the radar data to annotate objects in the street.	TRANSPARENCY It is not clear on whether the user can have an overview of the model before put it to work. It could be the open-source tool that can provide them with a preview of a running car that can annotate several objects around it.
IMPACT ON SOCIETY The problem is Here technology company need an open source tooling that can handle Lidar data so it can read and annotate different kind of data that are available on the street. For example, they want to detect if the object is an animal, a pedestrian or a vehicle, etc.	STAKEHOLDERS - HERE technology	SUSTAINABILITY It is also not clear on this part.
HATEFUL AND CRIMINAL ACTORS This can affect the privacy of other people on the street by scanning their behavior using a laser system. The data could be use for bad purposes depend on the user.	DATA Yes. Not every time the objects are well detected by the sensor.	FUTURE It could cause potential risks for human danger when letting the technology do all the data annotation for them.
PRIVACY I'm not sure.	INCLUSIVITY It could have a sample bias. Sample bias occurs when a dataset does not reflect the realities of the environment in which a model will run. This apply the same case for the Lidar technology.	FIND US ON WWW.TICT.IO THIS CANVAS IS PART OF THE TECHNOLOGY IMPACT CYCLE TOOL. THIS CANVAS IS THE RESULT OF A QUICKSCAN. Data Science

NAME: Data Science	HUMAN VALUES	TRANSPARENCY
DATE: September 6, 2024 12:24 AM DESCRIPTION OF TECHNOLOGY Research on Open Source tooling for Data Annotation	How is the identity of the (intended) users affected by the technology?	Is it explained to the users/stakeholders how the technology works and how the business model works?
	To help you answer this question think about sub questions like:	 Is it easy for users to find out how the technology works? Can a user understand or find out why your technology
	- If two friends use your product, how could it enhance or	behaves in a certain way? - Are the goals explained?
	detract from their relationship?Does your product create new ways for people to interact?	Is the idea of the technology explained?Is the technology company transparent about the way their

What is exactly the problem? Is it really a problem? Are	Who are the main users/targetgroups/stakeholders for	In what way is the direct and indirect energy use of this
you sure?	this technology? Think about the intended context by	technology taken into account?
Can you exactly define what the challenge is? What problem (what 'pain') does this technology want to solve? Can you make a clear definition of the problem? What 'pain' does this technology want to ease? Whose pain? Is it really a problem?	When thinking about the stakeholders, the most obvious one are of course the intended users, so start there. Next, list the stakeholders that are directly affected. Listing the users and directly affected stakeholders also gives an impression of the	One of the most prominent impacts on sustainability is energy efficiency. Consider what service you want this technology to provide and how this could be achieved with a minimal use of energy. Are improvements possible?
For who? Will solving the problem make the world better? Are you sure? The problem definition will help you to determine	intended context of the technology.
