GEA – ML

This project aims to automate the GEA (Generic Enterprise Architecture)
framework using AI and Natural Language Processing by analysing stategic
documents. Wanting to identify and extract statements from the documents
such as the mission, vision, core values, goals, and strategy. We want the
model to understand relationships between the different entities to connect
these statements and eventually automate the rating system.

Impact on society

What impact is expected from your technology?

This category has not been filled yet.

Hateful and criminal actors
What can bad actors do with your technology?

This category has not been filled yet.

Privacy

Are you considering the privacy & personal data of the users of your technology?

This category has not been filled yet.

Human values

How does the technology affect your human values?

This category has not been filled yet.

Stakeholders
Have you considered all stakeholders?

This category has not been filled yet.

Data

Is data in your technology properly used?

This category has not been filled yet.

Inclusivity
Is your technology fair for everyone?

This category has not been filled yet.

Transparency

Are you transparent about how your technology works?

This category has not been filled yet.

Sustainability

Is your technology environmentally sustainable?

This category has not been filled yet.
